NONPAREIL—*Old Style.*

I TYPOGRAPHY is the art of reproducing written language or thoughts by means of moveable type. When people talk of the advantages of printing, they frequently overlook the real point that is involved. We talk about the benefits that civilization has derived from printing. What benefit has it conferred on the people of China, who have known and practised the art for ages? As long as learning was the monopoly of the few, the privilege of a class, it served little better ends than to perpetuate and intensify popular ignorance. So long as writing was an accomplishment confined to the very few, it was of slight use as a means of promoting learning. And as long as printing was concerned only in the production of alphabets, playing-cards, and pictures of the saints, it did very little good indeed to the people at large. It was the invention of *Typography*, not the art of printing, that has done so much for the benefit of mankind. It is the easy and cheap methods of communicating thought from man to man, which enable a country to sift, as it were, its whole people, and to produce, in its science, its literature, and its arts, not the brightest efforts of a limited class, but the highest exertions of the most powerful minds among a whole community. The simple fact of cheapening the mode of production has revolutionised literature, and the peasant can now possess his book as well as the prince. And it is to the highest development of the principle of cheapness—the cheap press—the typography that circulates among the great mass of the people—that we are indebted for the wide-spread knowledge and civilization of the present day, and which promises also to be the indispensable agent of our future progress. The

TYPOGRAPHY is the art of reproducing written language or thoughts by means of moveable type. When people talk of the advantages of printing, they frequently overlook the real point that is involved. We talk about the benefits that civilization has derived from printing. What benefit has it conferred on the people of China, who have known and practised the art for ages? As long as learning was the monopoly of the few, the privilege of a class, it served little better ends than to perpetuate and intensify popular ignorance. So long as writing was an accomplishment confined to the very few, it was of slight use as a means of promoting learning. And as long as printing was concerned only in the production of alphabets, playing-cards, and pictures of the saints, it did very little good indeed to the people at large. It was the invention of *Typography*, not the art of printing, that has done so much for the benefit of mankind. It is the easy and cheap methods of communicating thought from man to man, which enable a country to sift, as it were, its whole people, and to produce, in its science, its literature, and its arts, not the brightest efforts of a limited class, but the highest exertions of the most powerful minds among a whole community. The simple fact of cheapening the mode of production has revolutionised literature, and the peasant can now possess his book as well as the prince. And it is to the highest development of the principle of cheapness—the cheap press—the typography that circulates among the great mass of the people—that we are indebted for the wide-spread knowledge and civilization of the present day, and which promises also to be the indispensable agent of our future progress. The introduction of typography into England

TYPE

TAKEN OVER FROM THE

ADJUTANT GENERAL'S PRESS.

GREAT PRIMER.

TYPOGRAPHY is the art of repro-²²¹
ducing written language or
thoughts by means of moveable
type. When people talk of the ad-
vantages of printing, they frequent-
ly overlook the real point that is
involved. We talk about the bene-
fits that civilization has derived
from printing. What benefit has it
conferred on the people of *China*,
who have known and practised the
art for ages? As long as learning
was the monopoly of the few, the
privilege of a class, it served little
better ends than to perpetuate and
intensify popular ignorance. So
long as writing was an accomplish-
ment confined to the very few, it
was of slight use as a means of pro-
moting learning. A.D. 1290.

EASTERN EUROPE.—Notwithstanding all that has been written and published, vague notions seem to be entertained in England of the state and prospects of the various races that inhabit the Ottoman Empire, as well as of the nature and forms of the Russian claim of protection over them. We shall endeavour to embody some of the principal facts connected with this intricate question, in order to assist our readers in better comprehending the events which are at present taking place. Everything tends to show that the affairs of Europe have reached an important crisis, and that a question to which imperfect reference has been so often made of late—that of the revival of nationalities—is about to force itself on our attention. By its geographical position, and the character of its government and people, Russia must always exercise
